

## FREQUENTLY ASKED QUESTIONS

- How long will the tan last?

>>> with proper care, typically a minimum of 7 days. Revisit the provided PREP sheet to be sure you are aware of pre & post-tan procedures + tips!

- Will I be orange?

>>> the formula I use has a RED base, not an orange base ...which means the color emulates a REAL tan, not a fake one. I apply the spray tan based upon your skin tone and will custom color match you!

- Is the spray tan sticky or stinky?

>>> not at all! Once I have completed application, I apply an amazing drying powder to be sure you feel most comfortable! My formula smells like warm vanilla sugar from Bath & Body works (yum!) or you can add custom pineapple or coconut scent drops to your tan for a few dollars more!

- How does it hold up in water or at the pool/beach?

>>> excessive sweat, sand, salt/chlorinated water can break down the life of the tan faster than usual. Using non-aerosol sun care, patting to dry after bathing or

swimming (NEVER rubbing the skin) and moisturizing often will extend the life of the tan.

- What should I wear?

>>> your choice, sista! An old, dark colored swimsuit or undergarments should you choose clothing ....or nothing at all! I have disposable underwear + nipple covers if you're in a pickle!

- I'm pregnant or nursing..is a spray tan safe for me?

>>> Always consult your Doctor first. We always want to be safe and referring back to them is key. Should you spray tan when pregnant, I provide nose filters for you. If you are nursing, I provide nipple covers for you.
